

# TURTLE

Evolutionists admit that there is not a single finding in the fossil record to show that turtles ever underwent evolution. In his book *Vertebrate Paleontology and Evolution*, Robert Carroll says that the earliest turtles are encountered in Triassic formations in Germany and that these are easily distinguished from other species thanks to their hard shells, which are very similar to those of specimens living today. He then goes on to say that no trace of earlier or more primitive turtles has ever been identified, although turtles fossilize very easily and are easily recognized even if only very small parts are found. (Robert Carroll, *Vertebrate Paleontology and Evolution*, p. 207)
