

# Evrim Teorisinin Geçersizliği ve İman Hakikatleri Hakkında Çeşitli Konular

Amerika'da 15 bin tirajla basılan ve başta ABD olmak üzere Kanada, Avrupa, Afrika ve Ortadoğu ülkelerinde okunan *Al Jumuah* dergisinde, Harun Yahya'nın bilimsel ve imani içerikli makaleleri 2004 yılında da her ay düzenli olarak yayınlanmaya devam etmiştir.

Derginin Ocak 2004 sayısında Harun Yahya'nın "Homo Florensis ve Evrim Masalı Hakkında Ortaya Çıkan Gerçekler" başlıklı makalesi yayınlanmıştır. Yazar bu makalesinde sayısız kereler bir çok yönüyle geçersizliğini ele almış olduğu evrim teorisinin yanlışlığı hakkında bilimin son bulguları ışığı altında bilgiler vermiştir.

Derginin Şubat 2004 sayısında yazarın "Hayatın Ritmi: Tiroid Bezi" başlıklı makalesi yayınlanmıştır.

Derginin Mart 2004 sayısında yazarın "Hücrenin İçindeki İletişim" başlıklı makalesi yayınlanmıştır.

Derginin Nisan 2004 sayısında yazarın "Polenler: Mükemmel Şekilde Paketlenmiş Genler" başlıklı makalesi yayınlanmıştır.

# POLLENS: PERFECTLY PACKAGED GENES

BY HARUN YAHYA

**P**ollen, a fine powdery substance, is first produced in flowers' male reproductive organs, and then moves to the female part of the flower. Having reached there it begins to mature and becomes ready to fertilize the next generation. This is the first stage in the life of pollen.

Pollen, a fine powdery substance, is first produced in flowers' male reproductive organs, and then moves to the female part of the flower. Having reached there it begins to mature and becomes ready to fertilize the next generation. This is the first stage in the life of pollen.

But pollen is not a plain old structure of pollen grains. It is made up of many parts, each with its own special job to do. The grain is made up of many parts, each with its own special job to do. The grain is made up of many parts, each with its own special job to do.

# THE MIRACLE IN THE ANT

BY HARUN YAHYA

**T**he living beings that have the densest population in the world are the ants. For every seven hundred million ants that come from this world there are only 60 seven human beings. There is a lot of other amazing information to learn about these creatures.

The ants are one of the most "social" groups among all the living beings. In an ant colony, there are many different "jobs" or "positions", which are naturally well "organized". This organization is so well advanced that it can be said that the ant colony has a "social hierarchy" similar to that of human beings.

The ants are not like other insects, which do not have a queen or a king. They are not like other insects, which do not have a queen or a king. They are not like other insects, which do not have a queen or a king.

# THE MIRACLE IN THE DEFENCE SYSTEM

BY HARUN YAHYA

**D**efence is an issue that has to do with the growth of a country. It is an issue that has to do with the growth of a country. It is an issue that has to do with the growth of a country.

The human body is surrounded by a great number of defence systems. These include the immune system, the skin, and the various organs of the body. Each of these systems has its own special job to do, and they work together to protect the body from harm.

The immune system is the most important part of the defence system. It is made up of many different cells, each with its own special job to do. These cells work together to identify and destroy any harmful organisms that enter the body.

## ONE OF THE MOST EVIDENT PROOFS OF CREATION: THE EAR

BY HARUN YAKAR

One of the most important concepts that one must employ when questioning Darwinian theory in the light of scientific discoveries is without a doubt the criterion that Darwin himself employed. In *The Origin of Species*, Darwin put forward a number of creative criteria suggesting how his theory might be tested and, if found wanting, disproved. Many passages in his book begin, "If my theory be true," and in these Darwin describes the discoveries his theory requires.

As we know, Darwinism explains the origin of life with two intermediate natural mechanisms: natural selection and mutation. According to Darwinian theory, the complexity of living things, such as man, came about through the operation of these two mechanisms. In the case of man, the hearing process begins with vibrations in the eardrum, which are transferred to the ossicles, and then to the cochlea, which is filled with a fluid. The vibrations in the cochlea are converted into electrical signals, which are then sent to the brain via the auditory nerve.

But the ear is not a simple structure. It is a complex of many parts, each of which has a specific function. The ear is a masterpiece of design, and its complexity is a clear indication of intelligent design. The ear is a structure that has been designed to receive and process sound waves, and its complexity is a clear indication of intelligent design.

The ear is a complex structure, and its complexity is a clear indication of intelligent design. The ear is a masterpiece of design, and its complexity is a clear indication of intelligent design. The ear is a structure that has been designed to receive and process sound waves, and its complexity is a clear indication of intelligent design.

## BACTERIAL RESISTANCE TO ANTIBIOTICS

BY HARUN YAKAR

One of the biological concepts that evolutionists try to present as evidence for their theory is the resistance of bacteria to antibiotics. Many evolutionists maintain that antibiotic resistance is "an example of the development of living things by selective pressure." A similar claim is also made for the genetic which build immunity to insects such as DDT.

However, evolutionists are mistaken in their claims. Antibiotic resistance is not a result of natural selection, but rather a result of intelligent design. The complexity of the bacterial cell, and its ability to resist antibiotics, is a clear indication of intelligent design.

The bacterial cell is a complex structure, and its complexity is a clear indication of intelligent design. The bacterial cell is a masterpiece of design, and its complexity is a clear indication of intelligent design. The bacterial cell is a structure that has been designed to receive and process information, and its complexity is a clear indication of intelligent design.

The bacterial cell is a complex structure, and its complexity is a clear indication of intelligent design. The bacterial cell is a masterpiece of design, and its complexity is a clear indication of intelligent design.
